This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

DEPARTMENT OF HEALTH.

REPORT FOR THE YEAR ENDING DECEMBER 31, 1900.

DEPARTMENT OF HEALTH—CITY OF NEW YORK,
SOUTHWEST CORNER FIFTY-FIFTH STREET AND SIXTH AVENUE,
BOROUGH OF MANHATTAN,
NEW YORK, November 29, 1901.

Hon. ROBERT A. VAN WYCK, *Mayor of The City of New York:*

SIR—I have the honor to transmit herewith the Annual Report of the Department of Health of The City of New York for the year 1900, pursuant to the provisions of section 1168 of chapter 378 of the Laws of 1897.

By order of the Board.

C. GOLDERMAN, Secretary pro tem.

NEW YORK, October 16, 1901.

Hon. ROBERT A. VAN WYCK, *Mayor of The City of New York:*

SIR—In acccordance with the provisions of section 1168, chapter 378, Laws of 1897, the Board of Health has the honor to present the following report of the operations of the Department of Health for the year ending December 31, 1900:

PUBLIC HEALTH.

The sanitary condition of the city during the year has been good, although the death-rate was slightly higher than in 1899. There were 70,872 deaths against 65,343 in 1899, giving a death-rate of 20.57 against 19.47 for the previous year.

The distribution of these deaths among the different boroughs is shown in the following table, which also gives the death-rates for the purposes of comparison:

BOROUGH.	TOTAL DEATHS.		DEATH RATES.	
	1899.	1900.	1899.	1900.
Manhattan	36,191	38,878	19.77	20.99
The Bronx	3,720	4,349	20.23	21.52
Brooklyn	21,649	23,507	19.13	20.09
Queens	2,510	2,760	17.29	17.95
Richmond	1,273	1,378	19.45	20.52
Total	65,343	70,872	19.47	20.57

A portion of the increase in the number of deaths may be considered to be offset by the increase of population. The Federal census of 1900 has rendered it possible to revise the estimates of population and correct the death rates for several years back to the last preceding census. The death rate for 1899 therefore becomes 19.47 instead of 18.41, as printed in the report for that year. If this rate had continued without change during the year 1900 there would have been 67,068 deaths, so that of the 5,529 deaths in 1900 in excess of those in 1899, 1,725 may fairly be charged to increased population, leaving 3,804 as the actual excess due to a higher mortality. This excess of deaths was mainly due, as shown in the report of the Registrar, to the epidemic of influenza during the earlier months of the year and the higher temperature of the summer months and the prolongation of the heated term to a later date than usual.

The decrease in the death rate has continued now for many years, with slight occasional fluctuations in the opposite direction, due to special causes, such as extraordinary weather, the influenza, etc., and the following table gives the estimated population for the middle of each year, corrected by the results of the Federal census of 1900, with the deaths and death rates, for twenty years:

Year.	Population.	Total Deaths.	Death Rate.	Year.	Population.	Total Deaths.	Death Rate.
1881	1,244,511	38,624	31.04	1891	1,659,654	43,659	26.31
1882	1,280,857	37,924	29.61	1892	1,708,124	44,329	25.95
1883	1,318,264	34,011	25.80	1893	1,758,010	44,486	25.30
1884	1,356,764	35,034	25.82	1894	1,809,353	41,175	22.76
1885	1,396,388	35,682	25.55	1895	1,873,201	43,420	23.18
1886	1,437,170	37,351	25.99	1896	1,906,139	41,622	21.84
1887	1,479,143	38,933	26.32	1897	1,940,553	38,877	20.03
1888	1,522,341	40,175	26.39	1898	3,272,418	66,294	20.25
1889	1,566,801	39,679	25.32	1899	3,356,722	65,343	19.47
1890	1,612,559	40,103	24.87	1900	3,444,675	70,872	20.57

The corresponding figures for the former City of New York (the present boroughs of Manhattan and The Bronx) since consolidation are as follows:

Year.	Population.	Total Deaths.	Death Rate.
1898	1,976,572	40,438	20.46
1899	2,014,330	39,911	19.81
1900	2,053,979	43,227	21.04

In the following table, which summarizes the previous one by five-year periods, the annual fluctuations are eliminated and the continuous decrease of the death-rate is more vividly shown :

Period.	Average Population.	Average Annual Deaths.	Death Rate.
1881–1885	1,319,357	36,255	27.48
1886–1890	1,523,603	39,248	25.76
1891–1895	1,761,668	43,414	24.64
1896–1900	2,784,101	56,602	20.33

If this table is made to apply to the boroughs of Manhattan and The Bronx only, the last line would read as follows :

Period.	Average Population.	Average Annual Deaths.	Death Rate.
1896–1900	1,978,315	40,815	20.63

CONTAGIOUS DISEASES.

There was a marked increase in the number of contagious and infectious diseases reported during the year, viz., a total of 41,709 against 33,486 in 1899, and 37,637 in 1898. The year 1899 was marked by a low mortality in almost every respect, partly, no doubt, owing to the equable temperature. The ensuing table gives the reported cases by boroughs for the three years since consolidation.

Borough.	1898.	1899.	1900.
Manhattan	23,974	21,630	23,637
The Bronx	3,003	1,504	3,916
Brooklyn	8,866	8,753	11,554
Queens	1,369	1,056	1,389
Richmond	425	543	1,213
Total	37,637	33,486	41,709

The diseases included in this table are those usually considered most amenable to sanitary control, viz., diphtheria and croup, measles, scarlet fever, typhoid fever and small-pox. It will be noticed that the total for 1900 is almost exactly as much in excess of the total for 1898 as that for 1899 is below it. Manhattan shows the smallest increase over 1899, about 10 per cent., and an actual decrease from 1898. All the other boroughs show an increase over 1898, as well as 1899, the greatest increases being in The Bronx and Richmond, where the cases reported are more than double what they were in 1899, and in Richmond nearly thrice the number reported in 1898.

These increases were due mainly to an increase of diphtheria and croup and of measles, there being an actual decrease of scarlet fever and a comparatively small increase of typhoid fever and small-pox, as shown by the following table :

Disease.	1899.	1900.	Increase.
Diphtheria and croup	11,520	12,913	1,393
Measles	12,530	19,299	6,769
Scarlet fever	7,387	6,683	704*
Typhoid fever	1,950	2,658	708
Small-pox	99	156	57
Total	33,486	41,709	8,223

* Decrease.

In the Borough of Manhattan there was a decrease in the reported cases of diphtheria and croup, but an increase in all the other boroughs, amounting in The Bronx to about 80 per cent. In measles, the increase in Manhattan was about 20 per cent. (10,690 against 8,517), in The Bronx about 400 per cent. (2,216 against 468), in Brooklyn about 70 per cent. (5,111 against 3,098), in Queens about 90 per cent. (591 against 307), and in Richmond about 400 per cent. (691 against 140). This was the most widespread epidemic of the year, with the exception of the influenza, and it is a notoriously difficult disease to control by the ordinary methods of isolation and disinfection. The mortality rate was not high—about 4½ per cent.

Scarlet fever decreased in every borough excepting The Bronx and Richmond, in each of which there was an increase.

Typhoid fever increased in every borough excepting Richmond, which showed a considerable decrease, mainly due to the fact that there was a local epidemic of the disease in that borough in the latter part of 1899.

INFANT MORTALITY.

The rate of mortality among children is usually looked upon as an excellent test, possibly the best crude test, of the sanitary condition of the community. It has not been possible to prepare a table showing the death rate of children under five years of age per 1,000 living at the same age, because the requisite figures have not yet been furnished by the Commissioner of the Census, nor is it possible to calculate the death rate of infants under one year of age per 1,000 births, on account of the imperfection of the birth returns. We are, therefore, compelled to take for the purpose of comparing one year with another, the proportion of deaths under five years of age to the total deaths of all ages, as shown in the following ten-year table :

Year.	Total Deaths.	Deaths Under 5.	Per Cent. on Total.
1891	43,659	18,224	41.75
1892	44,329	18,684	42.15
1893	44,486	17,865	40.16
1894	41,175	17,558	42.64
1895	43,420	18,221	41.95
1896	41,622	16,807	40.38
1897	38,877	15,395	39.60
1898	66,294	25,499	38.46
1899	65,343	23,801	36.42
1900	70,872	25,836	36.46

The increase in the percentage, as will be seen, is very slight over 1899, only 1-25 of one per cent., an increase adequately accounted for by the difference in the summer temperature of the two years. During the three years that have elapsed since consolidation, the showing for the boroughs of Manhattan and The Bronx (the old City of New York) is even better than this, viz.:

Year.	Total Deaths.	Deaths Under 5.	Per Cent. on Total.
1898	40,438	15,591	38.56
1899	39,911	14,391	36.06
1900	43,227	15,648	36.20

The routine work of the two Bureaus of the Department will be found presented in detail in the appendix to this report.

The enforcement of the orders of the Board, when an appeal to the courts became necessary, has been attended to in the most efficient manner by Assistant Corporation Counsel Henry Steinert and his assistants in the different boroughs, whose reports are presented below:

Borough of Manhattan.

Orders received from the Board of Health for prosecution and other legal action		18,557
Notices of intention to commence action on orders received where a violation existed	18,557	
Other notices	4,876	
		23,433
Actions commenced to recover penalties		1,804
Civil actions pending last year		306
Judgments recovered in Municipal Courts in favor of the Department for the sum of $209.50 in each case		69

Transcripts filed in County Clerk's office	40
Executions issued	40
Judgments vacated and set aside by order of the Court (50 of these judgments were obtained during the year 1899, one during the year 1897, and 31 during the year 1900)	82
Actions discontinued by request of the Board of Health, nuisance having been abated	1,739
Civil actions now pending	384
Arrests in Criminal Court for violation of Sanitary Code	406
Judgments on conviction in Courts of General and Special Sessions	282
Amount of fines imposed by Courts of General and Special Sessions upon conviction	$7,540 00
Amount of judgment and costs collected in civil actions and paid to Secretary of Board upon vacating default judgments	$236 99

BOROUGH OF THE BRONX.

Orders received from the Board of Health for prosecution and other legal action	1,343
Notices of intention to commence action on orders received where a violation existed	1,343

		117

DEPARTMENT OF HEALTH VS. WENDEL.

This action was brought in the Municipal Court, Seventh Judicial District, for a violation of the Tenement-house Law, and for non-compliance with an order issued by the Department of Health, requiring the defendant to make certain sanitary improvements and repairs to premises No. 560 Seventh avenue, of which he was the owner. Defendant interposed a general denial, and on the trial proved that the premises were leased to one Donohue for a long term of years. The owner claimed that having parted with the possession of the premises he was not liable for their sanitary condition. Judgment was rendered for the plaintiff for the prescribed penalty. Defendant took an appeal to the Appellate Term of the Supreme Court, and the case was argued on March 9, 1900, and a decision was rendered November 27, 1900, reversing the judgment.

Mr. Justice Beekman wrote a dissenting opinion, and application has been made by the Department of Health for leave to appeal to the Appellate Division of the Supreme Court upon the ground that the decision made was rendered by a divided court, and upon the further ground that questions of general public interest and importance are involved.

Sanitary Utilization Company vs. Department of Health.

On May 10, 1900, an action was commenced in the Supreme Court, First Department, by the Sanitary Utilization Company against the Department of Health to restrain the Board of Health from enforcing the provisions of chapter 663 of the Laws of 1900. This act prohibited the boiling of garbage, etc., in the Borough of Brooklyn, New York City, and by implication allowed it to be done in the other boroughs of the city. The Board of Health was charged with the duty of enforcing the law. To test the constitutionality of the act in question, a demurrer was interposed to the complaint, and the matter duly came on for argument, and was argued before Mr. Justice Andrews on June 5, 1900. Mr. Justice Andrews on October 24, 1900, overruled the demurrer on the ground that the act was unconstitutional. An appeal, however, has been taken to the Appellate Division from the interlocutory judgment entered on the decison, and is now pending.

On August 28, 1900, proceedings were commenced in the Supreme Court, New York County, by the People of the State of New York on relation of Arthur Jordan, against the Department of Health of The City of New York, to obtain a peremptory writ of mandamus requiring the Board of Health to grant or deny the relator's application for a permit to kill poultry at premises Nos. 21 and 22 East street. The relator's application for a permit was denied by the Board of Health, and his efforts in the Supreme Court to procure a permit were unsuccessful. In the opinion of the Board of Health, a sufficient number of these permits are now outstanding.

Violation of Section 119 of the Sanitary Code.

On July 27, 1900, one Herman Bindseil was arrested for a violation of section 119 of the Sanitary Code. The defendant carried on a fur-dyeing establishment at No. 42 West Ninety-ninth street, and used the roof of the building for drying furs. Complaint was made to the Department of Health by many persons living in the vicinity of the premises that particles of hair from the dyeing establishment entered the apartment-houses in the neighborhood, and the business was complained of as a public nuisance.

The matter was duly investigated by Inspectors of the Department, who found the complaints justified, and an order was duly made by the Board of Health requiring the nuisance to be abated. The defendant did not comply with this order and his arrest followed. He contested the case vigorously, and after a trial, lasting one week, in the Court of Special Sessions, he was found guilty and fined the sum of twenty-five dollars.

Impersonating Inspectors of the Department of Health.

During the year complaints have been made to the Board of Health by various citizens and property-owners of persons representing themselves to be Inspectors of the Department of Health and seeking to obtain money through such representations. These persons impersonate Inspectors and officers of the Department of Health for the purpose of blackmail. The Board of Health has made strenuous efforts to stop such practices, and on November 21, 1900, one George G. Wallace was arrested for a violation of section 1267 of the Laws of 1897. He was held in $500 bail for trial at Special Sessions, and on November 30, 1900, was tried and found guilty.

The Court imposed a fine of $250 or sixty days' imprisonment in the City Prison, and the defendant is now serving his term of imprisonment.

Violations of Section 134 of the Sanitary Code.

Numerous arrests were made during the year for violation of section 134 of the Sanitary Code, which prohibits the nuisance created by the use of soft coal. Many of the persons arrested sought to justify their use of soft coal by claiming that it was impossible to obtain hard coal in consequence of the strike among the coal miners. But a vigorous prosecution was made against all violations of the section in question, to hold the nuisance in check as far as possible. In some cases the defendants were fined by the Court of Special Sessions, and, in other cases, owing to the existence of the strike, sentence was suspended.

Violations of Section 26 of the Sanitary Code.

Recognizing that overcrowding of lodging-houses is a source of danger to the public health, the Department of Health has been endeavoring to break up the practice of overcrowding and, to keep such houses under control, the Board of Health requires a written permit, and that the houses intended to be used shall be sufficiently lighted and ventilated. During the month of December alone ten arrests were made for violation of the Sanitary Code in carrying on such places without a permit and for overcrowding.

One Thomas Kelly was the first person convicted for this offense, and he was fined ten dollars by the Court of Special Sessions. The second prosecution was against one Otto Barthel for carrying on a lodging-house at No. 406 East Fifth street. It was shown that he had no permit and that his place was in a largely overcrowded condition. Barthel was tried in the Court of Special Sessions December 24, 1900, and upon being found guilty was sentenced to thirty days' imprisonment in the City Prison.

Violations of Section 63 of the Sanitary Code.

The Board of Health is unceasing in its efforts to secure a pure and wholesome supply of milk to the people of the city. Section 63 of the Sanitary Code prohibits the sale of impure, unwholesome or adulterated milk, and makes the very possession of the article unlawful. During the year $6,765, as fines, were imposed upon defendants by the Court of Special Sessions, for violations of section 63, and the money was paid.

Maintaining Nuisance by Running Dynamo.

Arthur B. Proal, Jr., engineer for the New York and Staten Island Electric Company, of Livingston, Staten Island, was arested for violation of section 1201 of chapter 378 of the Laws of 1897. Defendant was charged with maintaining a nuisance. It was claimed by persons in the vicinity of the electric-light company that their rest and sleep were broken in consequence of the noise made by the running of dynamos. Defendant was arrested and on November 13, 1900, a motion was made by his counsel to transfer the case to the Grand Jury of Richmond County. The order of transfer was made by a Justice of the Supreme Court (Second Department), and the case is now before the Richmond County Grand Jury.

The appropriations made to the Department of Health for the year 1900 were as follows :

DEPARTMENT OF HEALTH.

Salaries, Board of Health and Secretary's Office		$42,880 00

In conclusion, the Commissioners desire to express their appreciation of the untiring efforts of the officers and employees of the Department to render it worthy of the esteem and confidence of the public.

Respectfully submitted,

M. C. MURPHY, President.
JOHN B. COSBY, Commissioner.
WM. T. JENKINS, M. D., Commissioner.
A. H. DOTY, Health Officer of the Port.
BERNARD J. YORK, President, Board of Police.

SANITARY BUREAU.

DEPARTMENT OF HEALTH,
SIXTH AVENUE AND FIFTY-FIFTH STREET,
NEW YORK, January 2, 1901.

To the Honorable Board of Health:

SIRS—I have the honor to submit the report of the work performed in the Sanitary Bureau during the year 1900.

The Sanitary Bureau of the Department of Health is under the charge of the Sanitary Superintendent, assisted by five Assistant Sanitary Superintendents, one in charge of each of the five boroughs.

F. H. Dillingham, M. D., in charge of the Borough of Manhattan.
Robert A. Black, M. D., in charge of the Borough of Brooklyn.
Eugene Monaghan, M. D., in charge of the Borough of The Bronx.
Obed L. Lusk, M. D., in charge of the Borough of Queens.
John L. Feeney, M. D., in charge of the Borough of Richmond.

The Sanitary Bureau is charged with the duty of inspecting and reporting, in proper form, all nuisances or causes of danger to the public health; with the execution of the orders of the Board; with the care of contagious diseases; with the inspection of foods and offensive trades; with the

inspection of mercantile establishments and issuance of employment certificates; with the pathological, bacteriological and chemical research and investigations, and with the inspection of scholars attending the public, parochial and private schools.

The number of inspections and reinspections made was 2,055,045, classified as follows:

By the Sanitary Inspectors	179,049
By the Sanitary Police	433,805
By the Division of Food Inspection and Offensive Trades	1,236,710
By the Division of Contagious Diseases	119,407
By the Division of Medical School Inspection	83,068
By the Division of Bacteriology	1,552
By the Division of Marine Inspection	1,454
Total	2,055,045

The number of complaints returned was 63,559, classified as follows:

By the Sanitary Inspectors	28,240
By the Sanitary Police	32,917
By the Division of Food Inspection and Offensive Trades	1,042
By the Division of Contagious Diseases	1,360
Total	63,559

The number of complaints received from citizens was 39,725, all of which were referred to the Sanitary Inspectors and the Sanitary Police for investigation and report.

The Sanitary Superintendent during the same period, under instructions and authority of the Board, granted 4,360 permits to discharge cargoes, under proper vouchers from the Health Officer of the Port, and 9,789 miscellaneous permits, under the Sanitary Code.

Work Performed by the Division of Sanitary Inspection.

Total number of inspections	114,772

Classified as to Character of Premises.

Number of tenement-houses	70,910
" lodging-houses	2,708
" private dwellings	5,859
" mercantile establishments	1,525
" manufactories and workshops	1,700
" stables	1,101
" sunken and vacant lots	1,507
" miscellaneous	29,462
Total	114,772

Number of complaints forwarded for Board orders	28,240
" negative reports forwarded	29,189
" reinspections on orders	64,277

MERCANTILE ESTABLISHMENTS.

Number of citizens' complaints received	971
" citizens' complaints returned for orders	403

The following tabulated statement and summary shows the date, location and character of premises, cause of action and the result of vacation of houses by the Board of Health, in compliance with the requirements of section 1315 of chapter 378 of the Laws of 1897 :

Borough of Manhattan.

BUREAU OF RECORDS.

Department of Health,
City of New York.

To the Board of Health:

Gentlemen—I have the honor to submit the report of the Bureau of Records for the year ending December 31, 1900.

There were reported during the year 81,721 births, 32,346 marriages and 70,872 deaths, showing an increase over 1899 of 4,089 births, 1,772 marriages and 5,529 deaths.

There was an increase in each of these items in each borough, the largest percentage of increase of births and deaths being in the Borough of The Bronx, and of marriages in the Borough of Queens.

These figures represent a birth-rate for the city of 23.72 in an estimated population of 3,444,675, against a rate of 23.13 in an estimated population of 3,356,722 in 1899, and a marriage-rate of 9.36, or 18.72 persons married in 1900 against 9.08, or 18.16 persons married in 1899.

The birth-rate in the different boroughs ranged from 27.26 in Manhattan to 19.29 in Brooklyn. These rates do not represent by any means the actual rates, but only the variation in completeness of the returns made by the medical attendants. Judging by the marriage-rate, which is high, the birth-rate of the entire city should be at least 30 per 1,000, which would give 103,340 births in 1900, instead of 81,721, i. e., more than 25 per cent. additional.

DEATHS.

The deaths for the year numbered 70,872, making the death-rate 20.57 per 1,000 living, against 19.47 in 1899. The results of the Federal census of 1900 have rendered possible a revision of the estimates of population since the last previous census, and has increased the death rate of 1899 from 18.41 to 19.47. These revised estimates will be found among the tables appended to this report.

The 70,872 deaths were distributed among the various boroughs, as follows:

BOROUGHS.	POPULATION, JUNE 1, CENSUS OF 1900.	ESTIMATED POPULATION, MIDDLE OF YEAR.	TOTAL DEATHS.	DEATH-RATE
Manhattan	1,850,093	1,850,887	38,878	20.99
The Bronx	200,507	202,092	4,349	21.52
Brooklyn	1,166,582	1,169,796	23,507	20.09
Queens	152,999	153,734	2,760	17.95
Richmond	67,021	67,166	1,378	20.52
Total	3,437,202	3,444,675	70,872	20.57

The death-rates for Manhattan and The Bronx are above the average for the city and those of Brooklyn, Queens and Richmond are below, Queens having the lowest rate of all, its population in previous years having been considerably underestimated.

In order to trace the cause of this increased mortality the following comparative table has been prepared, showing the deaths in 1899 and 1900 from all causes to which 300 or more deaths were due in the latter year, the list comprising more than 94 per cent. of all the deaths:

CAUSE OF DEATH.	1899.	1900.	INCREASE IN 1900.	DECREASE IN 1900.
Measles	587	816	229	.....
Scarlet fever	533	465	.....	68
Diphtheria and croup	1,924	2,277	353	.....
Whooping cough	514	584	70	.....
Typhoid fever	546	718	172	.....
Influenza	461	612	151	.....
Cerebro-spinal meningitis	394	306	.....	88
Diarrhœal diseases	3,449	3,851	402	.....
Erysipelas	230	316	86	.....
Alcoholism	442	403	.....	39
Cancer	2,136	2,291	155	.....
Phthisis	8,015	8,154	139	.....
Other tubercular diseases	1,562	1,516	.....	46
Diabetes	301	357	56	.....

Cause of Death.	1899.	1900.	Increase in 1900.	Decrease in 1900.
Congenital debility	4,339	4,801	462	.....
Old age	1,305	1,212	.....	93
Diseases of nervous system	5,590	5,342	.....	248
Heart diseases	3,953	4,069	116	.....
Bronchitis, acute and chronic	2,380	2,431	51	.....
Pneumonia	8,531	10,482	1,951	.....
Diseases of digestive organs	5,931	6,443	512	.....
Bright's disease and nephritis	5,113	5,362	249	.....
Puerperal diseases	558	711	153	.....
Accidents	2,620	3,010	390	.....
Suicides	628	761	133	.....
All other causes	3,301	3,582	281	.....
Total	65,343	70,872	6,111	582
Balance	5,529		5,529	

It will be noticed that there was an increase in 1900 in the deaths from almost all the causes in the list, the only noticeable decrease being in diseases of the nervous system. The most important increases were in measles, diphtheria and croup, diarrhœal diseases, congenital debility, pneumonia, diseases of the digestive organs, Bright's disease and deaths by violence, the excess of deaths due to these causes amounting to 4,548, or more than 82 per cent. of the entire increase for the year (5,529). The greater mortality for the year, therefore, was mainly due to the epidemic of influenza during the earlier months, and the higher temperature of the latter months, as compared with 1899, as will be shown hereafter.

If the deaths for the year be distributed by quarters, it will appear that the greater part of the increase of mortality occurred in the first part of the year and was mainly due to the influenza, as follows:

	Deaths from all Causes.			
	1899.	1900.	Increase.	Decrease.
First quarter	16,718	19,693	2,975	....
Second quarter	16,119	18,012	1,893	....
Third quarter	17,192	17,997	805	....
Fourth quarter	15,314	15,170	.....	144
Total	65,343	70,872	5,673	144

Thus, 4,868 of the total increase of 5,529, i. e. more than 88 per cent., occurred during the first six months of the year—2,422, or almost exactly half of the increase were caused by influenza and pneumonia alone. A considerable part of the remaining increase was caused by other diseases, the death rate from which is always greater when influenza is prevalent. This epidemic was, in all probability, the cause of the increase in the deaths from phthisis, heart diseases, diseases of the kidneys, and possibly, of suicides.

INFLUENZA.

This disease, now apparently permanently domiciled in this country, became comparatively quiescent after 1895, until 1898, since when it has been gradually increasing in virulence. During 1900 it caused more deaths in the boroughs of Manhattan and The Bronx (the old City of New York) than in any year since it first appeared in 1889, excepting 1891 (the worst epidemic of all), 1892 and 1895. The increase of deaths due to this cause first became noticeable in November, 1899, and the disease became more and more prevalent until the epidemic culminated in March, 1900, and then gradually faded away. A similar outbreak occurred in Europe, and in London the death rate during the first week of 1900 ran up to 37.1 per 1,000, a figure seldom reached in New York.

In the following table the deaths from influenza and pneumonia are given by months for 1899 and 1900, to allow of comparison :

	INFLUENZA.		PNEUMONIA.	
	1899.	1900.	1899.	1900.
January	237	32	1,035	1,129
February	91	112	952	1,348
March	50	219	912	1,753
April	24	143	890	1,511
May	13	42	743	961
June	....	16	491	595
July	1	2	436	433
August	....	1	343	343
September	1	2	428	367
October	9	....	574	539
November	10	5	703	659
December	25	38	1,024	844
Total	461	612	8,531	10,482

As will be seen from this table, there was a considerable excess of deaths from pneumonia in every month of 1900, as compared with 1899, until the first six months had passed, and during the latter half of the year a regular diminution. In December, there were indications of a recurrence of influenza, but the anticipated epidemic, which culminated in the middle of January, proved to be very mild compared with those of preceding years.

Contagious and Infectious Diseases.

There was an increase in the deaths from diseases of this class, excepting scarlet fever, which showed a slight decrease. The following table shows the number of deaths in 1899 and 1900 from diphtheria, croup, measles, scarlet fever, typhoid fever and small-pox, practically all the diseases which are under direct control by the ordinary methods of sanitary administration:

	1899.	1900.	Increase.
Manhattan	1,872	2,048	176
The Bronx	236	397	161
Brooklyn	1,321	1,604	283
Queens	133	153	20
Richmond	46	86	40
	3,608	4,288	680

Of this increase of 680, the greater part, viz., 572, was due to diphtheria and croup and measles, and, like the increase from influenza and pneumonia, was confined to the earlier portion of the year, as is shown by the following table:

	Diphtheria and Croup.			Measles.		
	1899.	1900.	Increase.	1899.	1900.	Increase.
First quarter	477	742	265	136	390	254
Second quarter	491	623	132	202	289	87
Third quarter	403	358	....	116	105	....
Fourth quarter	553	554	1	133	32	....
	1,924	2,277	....	587	816	....

The increase of measles was due to a short-lived epidemic which began in the Borough of The Bronx, and spread thence more or less throughout the city. Its greatest ravages were in the boroughs of The Bronx and Brooklyn, although it was also quite prevalent in Richmond, causing 15 deaths there in 1900, against 2 in 1899.

Diarrhœal Diseases.

The increase in deaths from diarrhœal diseases, which accounts for most of the excess of deaths during the latter part of the year, was mainly due to the much higher temperature and the more prolonged hot season as compared with 1899. There was a total excess of 661 deaths during the latter half of the year, and of this total 529 were due to deaths from diarrhœal diseases, enteritis, and gastro-enteritis, as follows:

Deaths from Diarrhœal Diseases, including Enteritis and Gastro-enteritis.

	1899.	1900.	Increase.
June	808	618	.....
July	2,078	2,106	28
August	1,109	1,373	264
September	771	1,054	283
October	350	494	144
	5,116	5.645	529

These months have been selected, because during the remaining portion of the year there are comparatively few deaths from these causes, which are emphatically summer complaints. Deaths of this class are always most numerous in July, but while there was very little difference for that month in 1899 and 1900, the great excess during August and September and even, though somewhat lessened, through October, emphasizes the great difference in the summer temperatures of the two years and the protracted duration of the heated term of 1900 until much later than usual in the fall.

Infant Mortality.

This is usually considered the most sensitive test of the sanitary condition of a community as regards environment and public health administration. While the actual number of deaths of children under five years of age was about 8½ per cent. greater than in 1899, being 25,836 against 23,801, it was not greater than might have been expected from the prolonged hot weather, and the proportion of child mortality to the total was only slightly increased, being 36.46, against 36.42 in 1899. The decrease during the past few years has been continuous, as shown in the following five-year table :

Year.	Total Deaths.	Deaths under 5.	Per Cent. on Total.
1896	41,622	16,807	40.38
1897	38,877	15,398	39.60
1898	66,294	25,499	38.46
1899	65,343	23,801	36.42
1900	70,872	25,836	36.46

If a comparison is made for the boroughs of Manhattan and The Bronx alone (the former City of New York) the decrease becomes still more marked, as follows :

Year.	Total Deaths.	Deaths under 5.	Per Cent. on Total.
1896	41,622	16,807	40.38
1897	38,877	15,398	39.60
1898	40,438	15,591	38.56
1899	39,911	14,391	36.06
1900	43,227	15,648	36.20

During 1899 and 1900 the percentage is even lower, it will be noticed, than for the city at large.

It is of interest to compare the infant mortality percentage for the different boroughs, as follows :

	Total Deaths.	Deaths under 5.	Per Cent. on Total.
Manhattan	38,878	14,240	36.63
The Bronx	4,349	1,408	32.38
Brooklyn	23,507	8,777	37.34
Queens	2,760	979	35.47
Richmond	1,378	432	31.35
	70,872	25,836	36.46

The percentage is highest, it will be seen, in Brooklyn and lowest in Richmond, where it was also the lowest in 1899.

Accidental Deaths.

3,010 deaths by accident were reported, against 2,620 in 1899, an increase of 390. This excess was mainly due to an increase of 76 deaths by drowning, 54 by poison and 174 by sunstroke, a total of 304.

Of the 292 deaths caused by railroad accidents, 15 by cable cars and 12 by horse cars were all in the Borough of Manhattan ; of steam railroad accidents, 33, the greatest number, were in the Borough of Queens, 22 each in Manhattan and The Bronx and 8 each in Brooklyn and Richmond. Of the 120 trolley accidents, 60, exactly one-half, were in Brooklyn, 29 in Manhattan, 17 in Queens, 11 in The Bronx and only 3 in Richmond.

Deaths by the electric current were almost doubled, viz., 20, against 11 in 1899. Of this number one-half, 10, were in Brooklyn and 4 each in Manhattan and Richmond.

Explosions of lamps and oil stoves were the cause of 20 deaths, 9 of which were in Brooklyn, and 5 persons were killed by lightning stroke, 3 in Queens and 1 each in Manhattan and Richmond.

There were 136 deaths from the accidental inhalation of illuminating gas, against 102 in 1899. The increase was chiefly in the Borough of Manhattan, where there were 98 such deaths in 1900, against 68 in 1899, while in Brooklyn there were only 28, against 24.

Suicides.

There were 761 suicides, against 628 in 1899, an increase of 133. Seventy-one of this increase was in the Borough of Manhattan and 45 in Brooklyn. In The Bronx there was a decrease and in Richmond an increase of 1, while in Queens the number was almost double, viz., 46, against 26 in 1899.

Of the total of 761, 578, or more than 75 per cent., were males and 183 females. Two hundred and fifty-one, nearly one-third of the whole, were Germans, and 249, almost another third, natives of the United States.

The means most frequently adopted was poison, which caused the death of 453 persons, almost 60 per cent. of the whole number. Two hundred and ninety-two persons—191 males and

101 females, used carbolic acid, now the favorite method of leaving the world, and 109, 81 males and 28 females—chose illuminating gas, these two methods alone accounting for 401 suicides by poison, almost 90 per cent. of the total of 453. Seventy-six persons killed themselves by hanging, and 168 by using firearms, a disproportionate number of these, as usual, being males, viz., 161, to only 7 females. Only 5 persons drowned themselves, all males, singularly enough, for drowning used to be a favorite method of suicide for females.

One female, presumably insane, took her own life by the extraordinary method of stuffing a handkerchief down her throat.

Births.

There were 81,721 births reported during the year, against 77,632 in 1899. The greatest increase was naturally in the Borough of Manhattan, but the greatest proportionate increase was in the Borough of The Bronx, and the next greatest in Brooklyn. The only boroughs in which the number of reported births exceeded the deaths were Manhattan, Queens and Richmond, the excess of births in Manhattan being between 11,000 and 12,000, while in Queens and Richmond the excess was slight, and in Brooklyn the excess of deaths was almost 1,000. The exact figures follow :

	Births, 1899.	Births, 1900.	Increase in 1900.	Percentage of Increase.	Deaths, 1900.	Excess, Births over Deaths.
Manhattan	48,397	50,494	2,097	4.33	38,878	11,616
The Bronx	3,671	4,122	451	12.28	4,349	227*
Brooklyn	21,203	22,572	1,369	6.46	23,507	935*
Queens	2,943	3,084	141	4.79	2,760	324
Richmond	1,418	1,449	31	2.19	1,378	71
	77,632	81,721	4,089	5.27	70,872	10,849

* Deficiency.

Of the 81,721 births reported, 42,076, or 51.49 per cent., were reported by physicians, and 39,645, or 48.51 per cent., by midwives. In 1899 the corresponding figures were 42,771 and 34,861, showing an actual decrease in the number of reports from physicians, and a very considerable increase in midwives' reports. This tends to corroborate the opinion often put forth in these reports that the dereliction of duty in this respect lies mainly with physicians rather than with midwives.

There were 42,016 male births to 39,705 females, a proportion of 1,058 males to 1,000 females. This is a reduction of the proportion in 1899, which ranged at the very high figure of 1,063. There were 573 pairs of twins reported, against 572 in 1899, about one in every 143 births, and 1,568 births were reported as illegitimate, about 1.91 per cent., a little higher than in 1899, when 1.72 per cent. was the rate.

Searches and Transcripts.

25,132 searches of the records of births, marriages and deaths were made during the year and 21,989 transcripts from them were issued, against 22,611 and 19,395, respectively, in 1899, an increase of 2,521 searches and 2,594 transcripts.

Respectfully submitted,

May 1, 1901. ROGER S. TRACY, M. D., Registrar of Records.

AFTER

Borough.	1898.		
	Population Middle of the Year.	Deaths.	Death Rates.
Manhattan	1,809,286	36,687	20.28
The Bronx*	167,286	3,751	22.42
Brooklyn	1,095,047	21,989	20.08
Queens	137,032	2,561	18.69
Richmond	63,767	1,306	20.48
City of New York	3,272,418	66,294	20.26

*The apparent great increase in the number of deaths in the Borough of The Bronx is due to the fact that before the present consolidated city was formed the deaths in institutions in what is now The Bronx were all redistributed to the locality in which the deceased resided before admission into the institution, a large portion of them belonging in what is now the Borough of Manhattan. Since consolidation, the redistribution of deaths in institutions is carrie out only within the limits of the borough itself.

by Boroughs from 1890–1897.

of the Federal Census of June 1, 1900.)
